Subject: Open Application – Senior Software Engineer (Java / Spring Boot)

Dear Hiring Manager,

I am a **Senior Software Engineer** with over **six years** of experience building backend systems in **Java and Spring Boot**, across core **banking, airline retail** and **education**. I am now based in Vantaa, and I am looking for a long-term role in Finland where I can keep growing toward software architecture.

My strongest work has been in distributed systems that cannot afford to fail. At People's Bank in Sri Lanka, I fixed critical production issues in a core banking platform used by **14.5 million customers**. At Air-Retailer in Dubai, I built an event-driven logging pipeline with Spring WebFlux and Kafka that **improved response efficiency by 40%**, and set up Spring Cloud Gateway as the single entry point for more than 25 microservices. At Pearson, I upgraded nine services from Spring Boot 2 to 3 and led a database upgrade across 15+ services with **zero downtime**, while mentoring junior engineers.

Looking ahead, my goal is to grow from owning services to shaping how whole systems are designed: clear service boundaries, secure by default, and easy to observe in production. Security is a big part of how I think about design. I have implemented OAuth2 and Single Sign-On across microservices and reduced vulnerability risk by 80% at Pearson through regular Snyk scanning. I am also completing my Master of Engineering at Metropolia (November 2026), where my thesis combines OCR and NVIDIA LLM APIs to give students AI-assisted feedback. This has made me think seriously about how AI tools can fit into real engineering workflows, not just demos.

I want to join a team that values clean design, honest code reviews and shared ownership. In return, I bring production experience from regulated, high-traffic systems and a habit of leaving codebases better than I found them. I am also learning Finnish (currently at a basic level) because I plan to build my career here.

I would be glad to discuss how my experience could support your team. Thank you for your time.

Kind regards

Thushan Jayasundara
